

Technology Solutions for the Energy Sector

Seismic Acquisition:

- Design and project management with expertise in:
 - Onshore environments from highly urban to very remote.
 - Traditional and high productivity source techniques.
 - 2D, 3D, 4D, 3C, and 9C methods.
 - o Transition zone through deep water marine environments.
 - Streamer, OBC, OBN, including ROV operations.
 - Source design and analysis.
 - Borehole seismic project design, operations, and support.
 - o Environment adapted designs to meet specific geologic and geophysical goals.
- Oversight and QC of all phases of the seismic project cycle including:
 - Bid preparation and analysis, permitting, surveying, archaeology, drilling and field operations.
 - Project start up support and source testing.
 - Field QC services for both land and marine projects.
 - o Field R&D projects.

Land Services:

- Surface, mineral, and regulatory permitting for seismic and non-seismic projects.
- Permit research and database for seismic and non-seismic projects.
- Lease mapping and database services.

Processing:

- Bid preparation, project management, and processing oversight.
- Data management and delivery.
